Thank you very much for uploading your manuscript to the Journal of Southwest Jiaotong University submission system. One of our editors will be in touch with you about the first decision within 10-14 days.

The following points were confirmed during submission:

1. Journal of Southwest Jiaotong University is an open access journal with publishing fees of EUR 500 for an accepted paper. This manuscript, if accepted, will be published under an open access Creative Commons CC BY license (<https://creativecommons.org/licenses/by/4.0/>), and I agree to pay the Article Processing Charges.
2. I hereby confirm my consent to make all payments for English Language Editing Services (EUR 150-200).
3. I understand that:
 - a. If previously published material is reproduced in my manuscript, I will provide proof that I have obtained the necessary copyright permission.
 - b. My manuscript is submitted on the understanding that it has not been published in or submitted to another peer-reviewed journal. Exceptions to this rule are papers containing material disclosed at conferences. I confirm that I will inform the journal editorial office if this is the case for my manuscript. I confirm that all authors are familiar with and agree with submission of the contents of the manuscript. The journal editorial office reserves the right to contact all authors to confirm this in case of doubt. I will provide email addresses for all authors and an institutional e-mail address for at least one of the co-authors, and specify the name, address and e-mail for invoicing purposes.

If you have any questions, please do not hesitate to contact the Editorial Office at editor@jsju.org

Kind regards,
Journal of Southwest Jiaotong University Editorial Office

Dear St. Laksanto Utomo,

Greetings from Journal of Southwest Jiaotong University,
Thank you so much for being so interested in submitting your research to our Journal of Southwest Jiaotong University.

The independent experts in the field have reviewed your manuscript.
We are pleased to inform you that the paper has been accepted for publication subject to minor revisions being made in response to the reviewers' comments given below.

You need to send the following to the editorial office via editor@jsju.org, if you want to publish in the Journal of Southwest Jiaotong University, Volume 58 (1), 2023:

The article, strictly formatted according to the template recommendations for authors and correct the article on the reviewers' recommendations, see <http://jsju.org/JournalTemplate.docx>, responses to reviewers, and proof of payment.

All revisions should be highlighted in the article in red. We hope you will do great.

Reviewers:

The topic is interesting and important. However, there are several key areas that need more work.

1 - The abstract should contain Purpose/Objectives, Methods/Analysis, Findings, and Novelty /Improvement. It is suggested to present the abstract in one 250 words paragraph.

Abstract template:

The research purpose is to analyze the / This article aims to The article describes a new method/idea (etc.) ..., based on ..., enabling to Using (describe the methods), the authors (describe the obtained results)..... The authors illustrate the proposed method/technique... The method/proposal allows to improve (any quantitative indicators by XX, X%)... The new method effectiveness evaluation is confirmed by the calculation New research results develop/supplement/improve ... and can be used for..../Novelty and scientific contribution...

2 - Describe the scientific methods used in the study more deeply. Please present a schematic representation of the steps involved in conducting the study.

3 - Authors should explain better the criteria for selecting the research object and the limitations of the application of the results obtained should be specified.

4 - Much more explanations and interpretations should be added to the result. It is suggested to compare the results of the present study with previous studies and analyze the results completely.

5 - Conclusion section needs to be described scientifically. Kindly frame it along the following lines:

- i. Main findings of the present study
- ii. Comparison with other studies
- iii. Implications of study
- iv. Strengths and limitations
- v. recommendation and future research.

Deadline for corrections and payment: February 13, 2023.

* Please write in the subject of the email: revised article and payment proof.

Invoice for the publication fee is attached. Banks fees must be paid by the customer for both payer and payee so that we can receive the full invoiced amount.

Please read our published articles <http://jsju.org/index.php/journal/issue/archive>.

Sincerely yours,

St laksanto Utomo <laksantoutomo01@gmail.com>

Dear editor
Here I send the revision package and the payment proof
As I just send by bank some days before
The UETR/ Ref no : f15765d3-1018-4f3d-bf6a-353f3f54af22
In the revision manuscript I used laksanto@gmail.com. As that is my primary email and this is my secondary email.
Kindly send me the Letter of Acceptance of the paper

Best regards,

Letter of Acceptance for Publication

No. 19/2023

February 15, 2023

Dear St. Laksanto Utomo,

Congratulations on accepting your paper titled "An Examination of Indigenous Community - Based Strategies for Sustaining Food Autonomy: Indonesia Case" in the Journal of Southwest Jiaotong University, Volume 58 (1), 2023, after it has been analyzed by reviewers and found acceptable.

This paper is classified as a professional paper.

Thank you for the contribution to the Journal of Southwest Jiaotong University and we look forward to receiving further submissions from you.

We believe that you will cite this valuable paper in some of your future papers that you will publish in other scientific journals.

Kind regards,

Editor-in-Chief 主编翟婉明

Reviewers:

The topic is interesting and important. However, there are several key areas that need more work.

- 1- The abstract should contain Purpose/Objectives, Methods/Analysis, Findings, and Novelty / Improvement. It is suggested to present the abstract in one 250 words paragraph.

Abstract template: The research purpose is to analyze the / This article aims to The article describes a new method/idea (etc.) ..., based on ..., enabling to Using (describe the methods), the authors (describe the obtained results).... The authors illustrate the proposed method/technique... The method/proposal allows to improve (any quantitative indicators by XX, X%)... The new method effectiveness evaluation is confirmed by the calculation New research results develop/supplement/improve ... and can be used for.../Novelty and scientific contribution...

Response: Thank you for your comments, as per your suggestions we already change the abstract part : “The wisdom of various traditions is one of Indonesia's greatest assets. The law society maintains and guards the sustainability of different wisdoms that have been handed down orally through generations. In each legal society, there are customary systems and structures which are prevalent within Indonesia and are of interest for scrutinizing in a framework that supports resilience in food production. It is becoming increasingly difficult for indigenous peoples to utilize their local knowledge to create food security in the modern world. This article aims to investigate the challenges faced by indigenous peoples in utilizing their local knowledge to create food security in the modern world. This article describes qualitative methods for generating data based on observations and interviews. Local wisdom of indigenous peoples is increasingly being eroded by the modern age as it relates to creating food security. As the results, Sago becomes a major source of income for the farmers, but they also continue to maintain tradition or habit to preserve their local wisdom. It is important to have policies that protect the local wisdom of indigenous peoples in a way that supports their activities in creating food security, as well as efforts made by the central and regional governments in maintaining the local wisdom of indigenous peoples. For further recommendation the research methodology and data analysis should be thorough and rigorous, incorporating both qualitative and quantitative methods to gain a comprehensive understanding of the strategies employed by indigenous communities.”

Which can be found in red highlight text.

- 2- Describe the scientific methods used in the study more deeply. Please present a schematic representation of the steps involved in conducting the study.

Response: Thank you for your generous review, we already change the Methods part and put more text, thus this can be useful for the newest version “The reason for choosing a qualitative approach for this research is because this method is particularly suitable for exploring and understanding the subjective experiences, perspectives, and practices of the indigenous communities in Indonesia.

Qualitative research is a flexible and open-ended method that allows researchers to gain a rich and nuanced understanding of complex social phenomena. It is particularly useful for studying issues that are not easily quantifiable, such as attitudes, beliefs, and experiences. In this study, the

researchers were interested in exploring the unique perspectives, experiences and practices of the indigenous communities in regards to food autonomy. A qualitative approach allowed the researchers to gain a deeper understanding of these issues through in-depth interviews, observations, and literature review.

The model of interactive data analysis used in this study involves a cyclical process of data collection, analysis, and interpretation. The three streams of activities that run simultaneously during the analysis phase are condensing the data, displaying the data, and drawing conclusions and checking these conclusions.”

1. Condensing the data: This involves reducing the amount of data collected and transforming it into a form that is easier to analyze and understand. This can include categorizing data into themes, summarizing findings, and identifying patterns and relationships in the data.
2. Displaying the data: This involves presenting the data in a way that makes it easier to understand and interpret. This can include creating tables, graphs, and visualizations that help to show patterns, trends, and relationships in the data.
3. Drawing conclusions and checking these conclusions: This involves using the data to reach conclusions about the research questions and checking these conclusions against the data to ensure their accuracy and validity. This stage also involves reflecting on the findings, considering alternative interpretations, and addressing any limitations or biases in the data.

In conclusion, the model of interactive data analysis used in this study provided a systematic and rigorous approach to analyzing the data collected, which allowed the researchers to gain a deeper understanding of the experiences, perspectives, and practices of the indigenous communities in Indonesia in regards to food autonomy [22].

- 3- Authors should explain better the criteria for selecting the research object and the limitations of the application of the results obtained should be specified.

Response: Thank you for your effort to make our research has better quality, in order to that we added some text in the Result to make clearer for selecting research object : “The results of the research from the case study of ethnoecology plant paddy in the Baduy society in Banten and the residents of Kampung Naga in Tasikmalaya indicated that the farmers in these communities play a crucial role in preserving the local varieties of paddy in situ. This highlights the importance of considering the role of local communities in conservation efforts and their potential as custodians of local biodiversity [27].

However, it is important to note that the findings of this study are specific to the communities in Baduy and Kampung Naga and may not necessarily be generalizable to other communities or regions. The choice of these communities as the research object was based on the availability of relevant data and access to the communities. This may have limited the diversity of perspectives and experiences represented in the study and may affect the validity of the conclusions drawn.”

And we added in Conclusion part for the limitation “Additionally, it is important to consider the limitations of the results obtained from this study. The use of qualitative research methods may have introduced biases and limitations in the data collection and analysis. For example, the perspectives and experiences of certain individuals may have been overrepresented, and the findings may not necessarily reflect the views of the entire community. It is also important to consider the context-specific nature of the findings and the need for caution when extrapolating the results to other settings.

In conclusion, the findings of this study are significant in highlighting the role of local communities in preserving local biodiversity, but it is important to consider the limitations and context-specific nature of the results. Further research is needed to validate and expand upon these findings and to understand the factors that contribute to successful conservation efforts in different communities and regions.”

Hope it will increase the manuscript quality

- 4- Much more explanations and interpretations should be added to the result. It is suggested to compare the results of the present study with previous studies and analyze the results completely.

Response : In response to the suggestion to compare the results of our study with those of previous studies, we have added a comparison of our findings with those of previous research on indigenous community-based strategies for sustaining food autonomy in Indonesia.

We have conducted a thorough review of the existing literature on the topic, including studies on the role of indigenous communities in preserving local food varieties and the strategies they use to maintain food autonomy. We have analyzed these previous studies in relation to our own results and discussed the similarities and differences between the findings.

This comparison will provide a deeper understanding of the contribution of our study to the existing body of knowledge on the topic and highlight the unique aspects of our research. By comparing our results with previous studies, we aim to further enhance the significance and impact of our findings.

In conclusion, we believe that the addition of the comparison with previous studies will significantly enhance the contribution of our study to the field of indigenous community-based strategies for sustaining food autonomy in Indonesia.

- 5- Conclusion section needs to be described scientifically. Kindly frame it along the following lines:
 - i. Main findings of the present study
 - ii. Comparison with other studies
 - iii. Implications of study
 - iv. Strengths and limitations
 - v. recommendation and future research.

Response: Dear Reviewer,

Thank you for your constructive feedback. I understand the importance of a scientifically described conclusion section and I have taken your suggestions into consideration. I have revised the conclusion section.

I hope that this revised conclusion section meets your expectations and fully captures the essence of the study. Thank you again for taking the time to review my work.

Best regards,

Title of your paper: AN EXAMINATION OF INDIGENOUS COMMUNITY-BASED STRATEGIES FOR SUSTAINING FOOD AUTONOMY: INDONESIA CASE

Corresponding Author's Email Address: laksantoutomo01@gmail.com

Author(s): St. Laksanto Utomo

Keywords: Local wisdom, Food Security, Indigenous Peoples

Abstract: The wisdom of various traditions is one of Indonesia's greatest assets. The Law Society maintains and guards the

sustainability of different wisdoms that have been handed down orally through generations. In each legal society, there are customary systems and structures which are prevalent within Indonesia and are of interest for scrutinizing in a framework that supports resilience in food production. It is becoming increasingly difficult for indigenous peoples to utilize their local knowledge to create food security in the modern world. The study aims to investigate the challenges faced by indigenous peoples in utilizing their local knowledge to create food security in the modern world. Qualitative methods such as observations and interviews were employed to create the data. Many government policies place a higher priority on the results of development than on preserving the local wisdom of indigenous groups. The government's policies such as the green revolution, spatial planning policies, and land use policies are not conducive to the development of the indigenous knowledge base in their regions. Therefore, indigenous peoples became dependent on food sources from outside their environment. Effort preservation can happen because there exists support and work same with various covering party society, state government and government area. Factors that comprise the factor are factors related to economics and factors related to culture.
