ABSTRACT

NIDA HANIFAH Community-Based Household Waste Management In Kelurahan Sukatani Depok. Guided by prof. Dr. Ir. Kholil, M. Kom and Ps. Dyah Prinajati, ST., MT

Based on the law number 15 of 1999, regarding the establishment of the municipality of Depok Level II which was established on April 20, 1999, and inaugurated dated 27 April 1999 and made as the anniversary of Depok city. Depok City has an area of 20.50.54 Ha consisting of 3 (three) sub-districts plus part of Bogor Regency Region Region, Depok City Government also has excellent programs that is Zero Waste City. To achieve this program needs to civilize the residents to sort the waste, starting from the source of the household level is the first step that must be done. Currently Sukatani urban village has not found the right strategy in household waste management, a problem that often happens is the difficulty of awareness of society in sorting garbage, although it has been socialized by the Department of hygiene and still many that have not been done as well. Method used in the research was MPE (Exponential pair wise method). Result of the study that law enforcement is the highest rank of strategy which provide with the real indicator.

Appropriate management strategies in community-based waste management using methods. MPE or Method. Exponentials have an advantage in reducing the bias that can occur in the analysis. Higher results. The results of this study are the results of the assessment supported by. Which has been determined according to the aspect of waste management. And selected three (3) top ranking for priority.

Keywords: Depok City, Sukatani Village Data, Exponential Accounting Method (MPE)
